

IOT POWERED VEHICLE INTELLIGENCE

- Real-time visibility into vehicle performance, driver behavior & diagnostics with intelligent analytics and AI-driven recommendations
- Easy plug & play setup
- Fully managed white labeled Solution

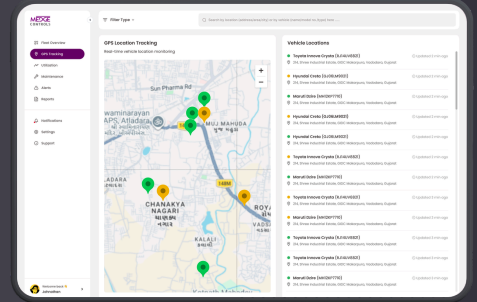

HARDWARE (VEHICLE EDGE DEVICE)

- Compact plug & play device designed for commercial vehicles.
- OBD-II (J1979) interface via standard OBD port, with inbuilt GSM, GPS, gyroscope & accelerometer for real-time tracking and motion detection.

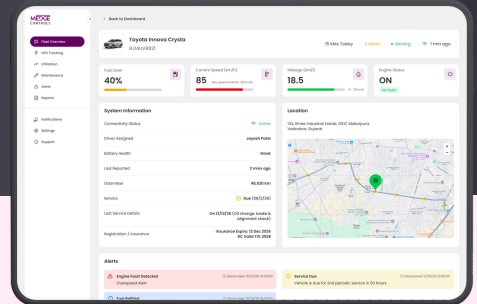

SOFTWARE (CLOUD, MOBILE & AI CHATBOT)

- Access vehicle data on mobile and PC via a secure cloud platform.
- AI-powered chatbot enables instant queries for vehicle status, fuel level, trips, alerts, and maintenance information.

SMART FEATURES

- Geofencing, trip tracking, utilization insights & Critical alerts for overspeeding, engine faults, abnormal behavior and excessive idling
- Instant alerts via WhatsApp, Email, SMS & AI chatbot.

PROBLEMS WE SOLVE

Vehicle Health Visibility

Monitor engine parameters like RPM, coolant temperature, battery and diagnostics (DTC codes).

Fuel Efficiency Optimization

Track fuel usage patterns and identify inefficiencies to reduce operating costs. Prevent misuse and theft.

Driver Behavior Monitoring

Detect overspeeding, harsh braking, rapid acceleration & excessive idling.

Timely/Preventive Maintenance

Get automated service alerts based on usage and vehicle condition.

01 Seamless integration with SAP and ERP systems

02 Scalable architecture for multi-vehicle monitoring

03 AI Chatbots with Whatsapp integration - MIRA AI

04 Easy report export to Excel and PDF formats
